About the Book

The rise of cloud computing and the Internet of Things (IoT) has fueled a revolution in the transportation industry. Connected vehicles, equipped with sensors and communication devices, are paving the way for smart and autonomous transportation systems. Cloud and IoT-Based Vehicular Ad Hoc Networks (VANETs) are at the forefront of this transformation.

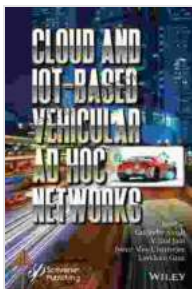

This groundbreaking book provides a comprehensive overview of VANETs, focusing on the integration of cloud computing and IoT technologies. Written by leading experts in the field, it covers every aspect of VANETs, from fundamental concepts to cutting-edge applications.

By reading this book, you will gain a deep understanding of:

- The architecture and protocols of VANETs
- The role of cloud computing and IoT in VANETs
- Security and privacy issues in VANETs
- Applications of VANETs in various domains, such as traffic management, vehicle safety, and infotainment
- Future trends and research directions in VANETs

This book is an essential resource for researchers, engineers, and anyone interested in the future of transportation. It will help you stay ahead of the curve and unlock the full potential of connected cars.
