

Weird Earth: Uncovering the Truth Behind Strange Planet Myths

We live on a planet that is full of strange and wonderful things. But there are also a lot of myths and misconceptions about our planet that can be difficult to separate from the truth. In his new book, *Weird Earth*, Donald R. Prothero debunks some of the strangest and most enduring myths about our planet, including:

Weird Earth: Debunking Strange Ideas About Our Planet

by Donald R. Prothero

★★★★☆ 4.4 out of 5

- **The Earth is flat.** This is one of the oldest and most persistent myths about our planet. But it's simply not true. The Earth is a sphere, and there is a wealth of scientific evidence to support this fact.
- **There is a secret underground civilization.** This is a popular myth that has been featured in countless books and movies. But there is no evidence to support the existence of a secret underground civilization. In fact, the Earth's crust is only about 30 miles thick, and there is no room for a large underground civilization to exist.

- **The Earth is hollow.** This is another popular myth that has been around for centuries. But it's simply not true. The Earth is a solid planet, and there is no evidence to support the idea that it is hollow.
- **The Earth is moving faster and faster.** This is a relatively new myth that has been popularized by the internet. But it's not true. The Earth's rotation is actually slowing down, not speeding up.

These are just a few of the many myths that Prothero debunks in *Weird Earth*. He does so with wit and scientific rigor, and he provides a wealth of evidence to support his claims. *Weird Earth* is a fascinating and informative book that will challenge your beliefs about our planet.

If you're interested in learning more about the strange and wonderful planet we live on, then I highly recommend reading *Weird Earth*. It's a book that will open your eyes to the truth about our planet and will leave you with a newfound appreciation for its beauty and complexity.
